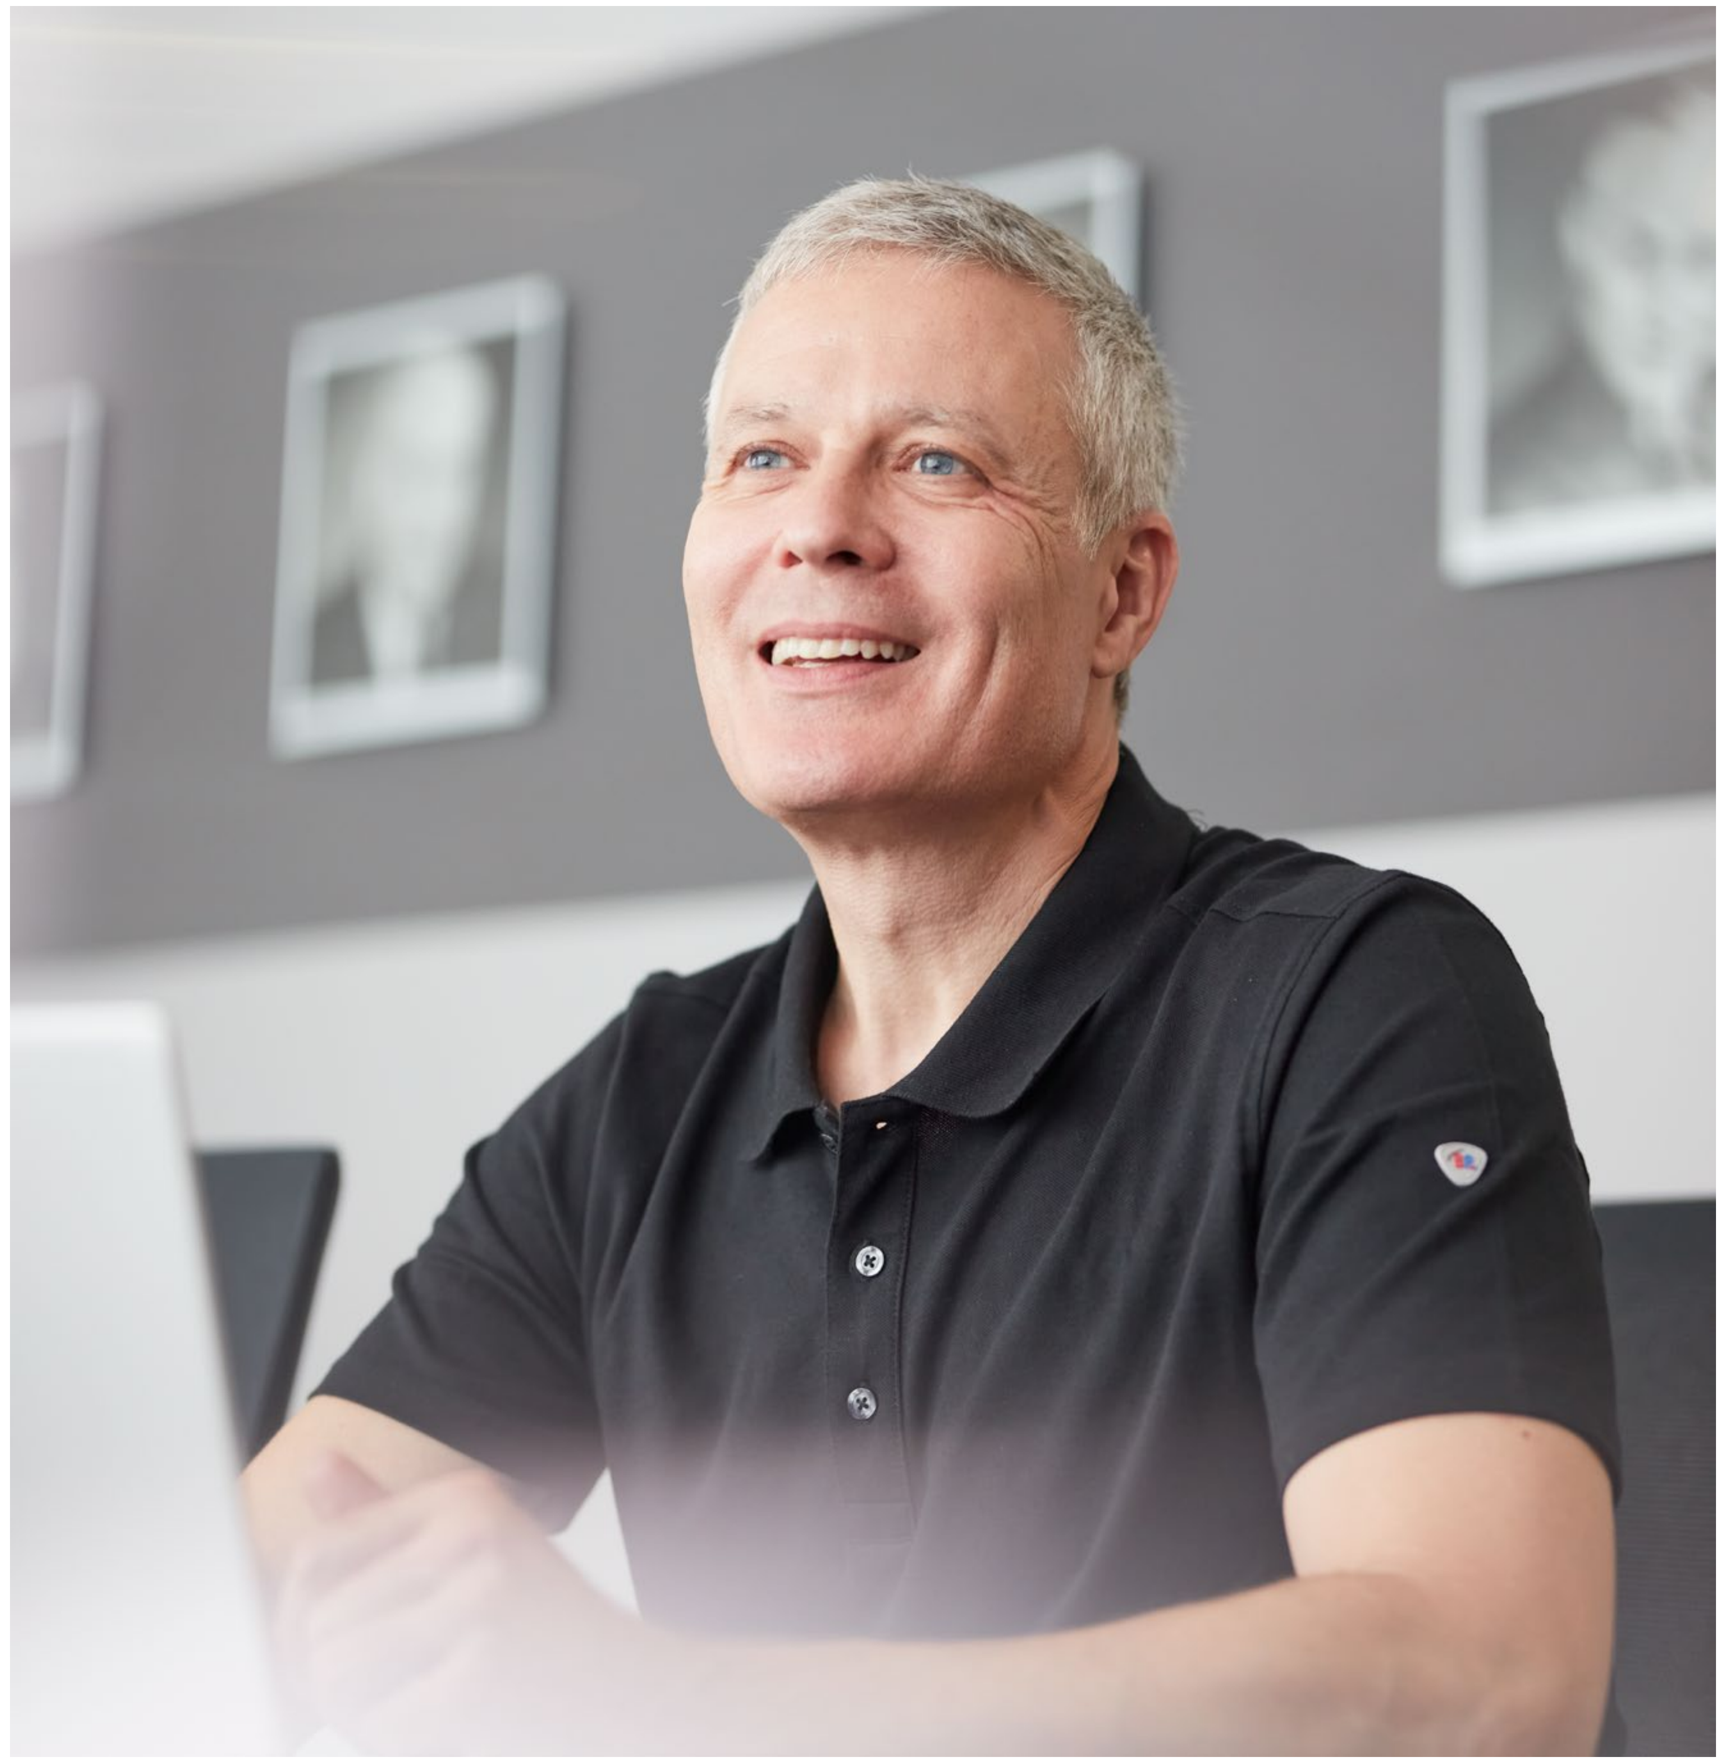
BP® Sustainability Report 2024

www.bp-online.com

BIERBAUM-PROENEN. SINCE 1788.

Despite global crises and changing environmental regulations:

Sustainability remains a top priority for us. Also in 2025.



Dear Reader,

In 2024, the world changed – and 2025 continues at the same pace. At times, it feels like everything has turned 180 degrees. Sustainability has taken somewhat of a back seat, while other issues have come to the forefront.

There has also been much criticism of the excessive bureaucracy that has accompanied sustainability legislation at the EU and federal levels. This conversation is important, because sustainability can only be implemented successfully by companies if they are not overwhelmed – and if bureaucracy does not paralyse economic activity.

And yet, at BP® we know: sustainability is not a passing trend. Many issues demand determined and committed action – climate change, for example. The textile industry is a major emitter of greenhouse gases. We are continuing to work toward achieving ambitious CO_2 reduction targets.

Karsten Schwanke, meteorologist and science journalist, supports us on this demanding journey by offering valuable input as a climate advisor. You can read more about this on page 24.

Our greatest contribution to sustainability, however, remains the quality of BP® products. The longer a product lasts, the more it contributes to sustainability. That's exactly what the quality-driven BP® team works on every day – developing workwear solutions that meet an exceptional standard of quality.

And that's how we will continue in the future.

Yours,

Harald Goost

Climate Expertise Meets Practice – Karsten Schwanke at BP®.

You can read the full article on page 24/25.

[…] I AM, OF COURSE, AWARE OF THE CHALLENGES – ESPECIALLY WHEN IT COMES TO REDUCING CO_2 EMISSIONS. FROM WHAT I'VE HEARD, MUCH HAS ALREADY BEEN ACHIEVED IN RECENT YEARS. BUT LARGE CO_2 BUDGETS STILL REMAIN IN PRODUCTION, LOGISTICS AND THE VEHICLE FLEET. […] I'M CONVINCED THAT THIS WILL BE AN EXCITING JOURNEY FOR BOTH OF US – FOR BP® AND FOR ME.

Karsten Schwanke – meteorologist and climate expert

CSRD
Corporate Sustainability Reporting Directive.

CSRD Directive:

Uniform standards for greater transparency.

The CSRD (Corporate Sustainability Reporting Directive) sets out clear requirements and standards to ensure consistent and transparent sustainability reporting. These standards cover both financial and non-financial aspects, including environmental matters, social responsibility and corporate governance.

As we already mentioned in our last sustainability report, we are working intensively to meet these new requirements and to implement them. For us, as a medium-sized company, this means a considerable effort – even though we can draw on more than twelve years of sustainability work and a strong baseline.

Nevertheless, we support the objectives of the CSRD and are working hard to compile and present the required data in a comprehensive and transparent way. At the same time, we are aligning the formal requirements with our lived sustainability strategy. For this reason, we have deliberately kept this year's sustainability report compact.

We are currently updating the materiality analysis introduced last year, using it to define our key areas of focus, and are in close dialogue with the relevant stakeholders.

Note: Due to revisions and current proposals relating to the EU's Omnibus Regulation, the CSRD is still under review. At the time this report was finalised, no final decision had yet been made. Nevertheless, we are continuing our work on these issues without interruption.

CSRD AS PART OF THE EU GREEN DEAL

Due to the challenges mentioned, this report focuses on the following key areas:

- What is the CSRD and what does it mean?
- Sustainability Strategy
- Supply Chain
- Climate Protection
- Social Responsibility

The impact of our business on people and the environment:

The BP® Double Materiality Analysis.

The EU requirements under the European Sustainability Reporting Standards call for a comprehensive analysis of the impact that a company's business activities have on people and the environment. The goal is to ensure cross-industry comparability.

The so-called double materiality analysis takes into account various sustainability-related impacts on the company. On the one hand, it assesses the environmental and social effects of the company's own actions (inside-out perspective); on the other hand, it examines how external sustainability factors influence the company's financial position, strategy and risk assessment (outside-in perspective).

This holistic approach makes it possible to identify relevant topics and integrate them transparently into the report.

EXAMPLE ILLUSTRATION OF DOUBLE MATERIALITY:

SUB-TOPIC	MATERIALITY	DESCRIPTION	IMPACT	EXTENT	JUSTIFICATION
ESRS E1 Climate Change Energy	Impact Materiality – Positive	Energy savings in the production process	Savings or recovery can help conserve resources	medium and medium-term	Current possible savings (e.g. PV electricity, heat recovery) reduce resource consumption, but do not completely eliminate it.
	Impact Materiality – Negative	Energy-intensive production processes	Without savings efforts, finite resources continue to be consumed	medium and medium-term	The demand and related consumption caused by us is limited, but still has negative effects.
	Financial Materiality – Opportunity	Energy savings in the production process	Savings can help stabilise prices and reduce CO_2 costs	low and long-term	Possible savings are limited by investment requirements and take effect later.
	Financial Materiality – Risk	Energy-intensive production processes	Little or no savings result in significant additional costs (e.g. CO_2)	medium and medium-term	Without savings, production becomes significantly more expensive and product marketability is negatively affected.

This example addresses the topic ESRS E1 Climate Change and the sub-topic Energy Use within the context of our business model.

102-9, 102-11, 102-15, 102-16, 102-21, 102-25, 102-29, 102-31, 102-42, 102-43, 102-44, 102-47, 416-1

Sustainability Strategy.

236 years of Bierbaum-Proenen:

More than the sum of its parts.

DETAILED, BUT WITH GREAT IMPACT: OUR SUSTAINABILITY TOPICS.

From the digital product passport to the materiality analysis, from reporting obligations to the corporate CO_2 balance: at BP®, we have been working on our Environmental, Social and Governance (ESG) topics for many years. This ongoing commitment is also the reason why we have been named a Fair Wear Leader for the eleventh year in a row – an award given by the Fair Wear Foundation (FWF) to companies that demonstrate responsible sourcing practices on many levels. These aspects are key elements of our complex sustainability strategy, which fits together like pieces of a puzzle.

From Planning to Results:

BP® Sustainability Goals for 2030.

BP® Logistics did not achieve the targeted CO_2 reduction goals for 2024.

Our logistics partner carried out extensive modifications and investments in the area of solar energy, which delayed the completion of our data collection. However, we are in close contact and continue to push this topic forward.

The remaining CO_2 emissions are offset by DPD and DHL through climate protection projects.

We have a good overview of emissions in transport logistics, but the avoidance planning is still in progress.

2024

Completed: In 2024, BP® once again achieved its CO_2 reduction targets at the Cologne headquarters. The remaining emissions are offset through climate protection projects.

2024 2025

- Expansion of the BP® Circular Economy product range
- Installation of collection containers for fabric remnants and used clothing for recycling

2026

BP® products feature a digital product passport.

Our goal originally planned for 2025 must be postponed by one year, as key primary data on CO_2 emissions from upstream supply chain stages is still missing. However, with the introduction of the RETRACED platform, we have already established one of the systemic foundations for the digital product passport.

2028

- Reuse of fabric remnants: 20% of the fibres used come from fabric leftovers and collected used clothing

2030

- At least 50% of the BP® product range is recyclable
- First collaborations as part of circular projects

102-9, 102-15, 102-21, 102-29, 102-31, 102-43, 301-2, 301-3, 302-1, 302-4, 302-5, 305, 308-1, 308-2

Responsibility starts with purchasing:

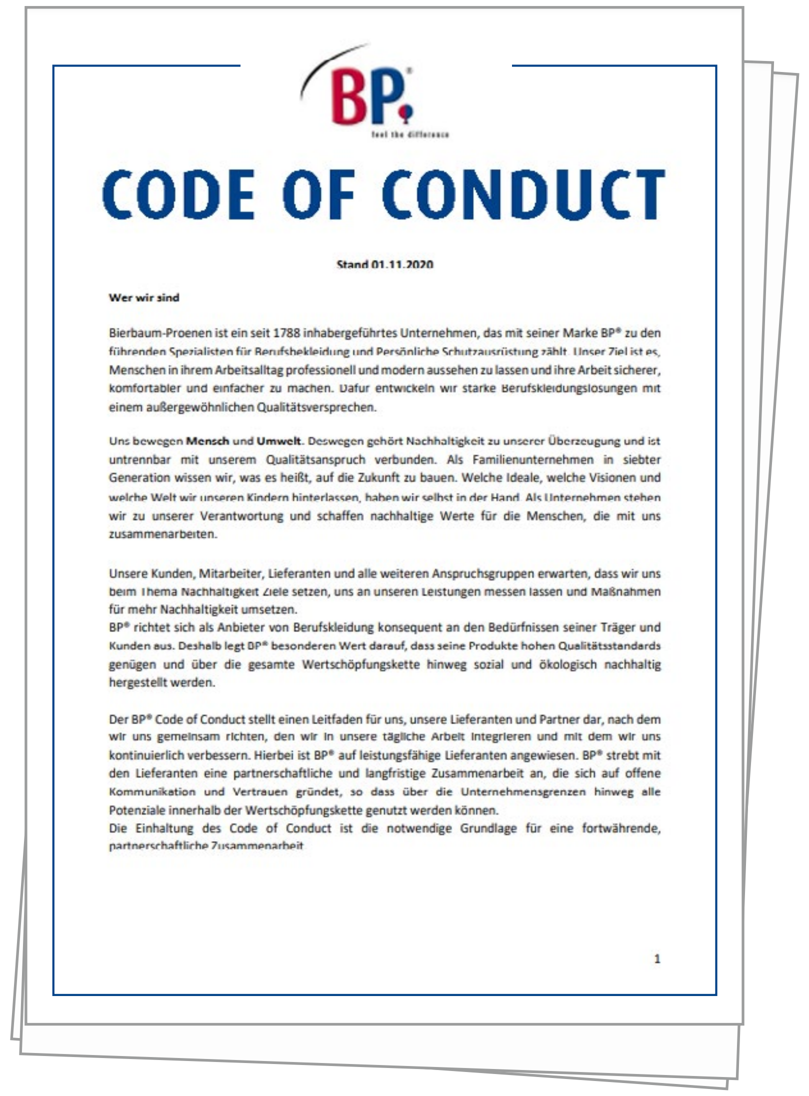
BP® has high standards – especially when it comes to sourcing.

In working with our existing suppliers and selecting new ones, we follow a clear sourcing strategy. This strategy is based on our needs, due diligence obligations, and our risk analysis.

Our risk analysis is an integral part of the onboarding process, and we take human rights aspects very seriously.

BP® CODE OF CONDUCT

YOU CAN FIND OUR CODE OF CONDUCT HERE.



BP
feel the difference

CODE OF CONDUCT

Stand 01.11.2020

Wer wir sind

Bierbaum-Proenen ist ein seit 1788 inhabergeführtes Unternehmen, das mit seiner Marke BP® zu den führenden Spezialisten für Berufsbekleidung und Persönliche Schutzausrüstung zählt. Unser Ziel ist es, Menschen in ihrem Arbeitsalltag professionell und modern aussehen zu lassen und ihre Arbeit sicherer, komfortabler und einfacher zu machen. Dafur entwickeln wir starke Berufskleidungslösungen mit einem außergewöhnlichen Qualitätsversprechen.

Uns bewegen **Mensch** und **Umwelt**. Deswegen gehört Nachhaltigkeit zu unserer Überzeugung und ist untrennbar mit unserem Qualitätsanspruch verbunden. Als Familienunternehmen in siebter Generation wissen wir, was es heißt, auf die Zukunft zu bauen. Welche Ideale, welche Visionen und welche Welt wir unseren Kindern hinterlassen, haben wir selbst in der Hand. Als Unternehmen stehen wir zu unserer Verantwortung und schaffen nachhaltige Werte für die Menschen, die mit uns zusammenarbeiten.

Unsere Kunden, Mitarbeiter, Lieferanten und alle weiteren Anspruchsgruppen erwarten, dass wir uns beim Thema Nachhaltigkeit Ziele setzen, uns an unseren Leistungen messen lassen und Maßnahmen für mehr Nachhaltigkeit umsetzen.
BP® richtet sich als Anbieter von Berufskleidung konsequent an den Bedürfnissen seiner Träger und Kunden aus. Deshalb legt BP® besonderen Wert darauf, dass seine Produkte hohen Qualitätsstandards genügen und über die gesamte Wertschöpfungskette hinweg sozial und ökologisch nachhaltig hergestellt werden.

Der BP® Code of Conduct stellt einen Leitfaden für uns, unsere Lieferanten und Partner dar, nach dem wir uns gemeinsam richten, den wir in unsere tägliche Arbeit integrieren und mit dem wir uns kontinuierlich verbessern. Hierbei ist BP® auf leistungsfähige Lieferanten angewiesen. BP® strebt mit den Lieferanten eine partnerschaftliche und langfristige Zusammenarbeit an, die sich auf offene Kommunikation und Vertrauen gründet, so dass über die Unternehmensgrenzen hinweg alle Potenziale innerhalb der Wertschöpfungskette genutzt werden können.
Die Einhaltung des Code of Conduct ist die notwendige Grundlage für eine fortwährende, partnerschaftliche Zusammenarbeit.

1

CODE OF CONDUCT

The BP® Code of Conduct forms the foundation of our business relationships with customers, partners, and suppliers. It is based on the OECD Guidelines and the ILO core labour standards. We place great importance on responsible purchasing practices and work with our business partners as equals. Open communication is essential for this. We support our garment manufacturers and suppliers, for example, by forecasting our demand several months in advance, which enables reliable production planning.

We are currently working with our partners to review the implementation of our Code of Conduct and verify compliance using questionnaires through our supply chain platform RETRACED. This is part of the stakeholder dialogue that results from our materiality analysis. The findings from these surveys help us refine our sourcing strategy and minimise key risks – for example, in the areas of gender equality, women's rights, fair wages or climate protection.

These approaches apply to all direct partners as well as their upstream suppliers. We are working intensively to ensure that our responsible business practices extend throughout the entire depth of our supply chain.

Our approach to responsible purchasing is based on the Common Framework for Responsible Purchasing Practices, developed by several multi-stakeholder initiatives. Within this framework, we continuously review and refine our methods.

BP® PARTNER

The selection of a new BP® partner (garment manufacturer or material supplier) is governed by clearly defined processes.

102-2, 102-9, 102-11, 102-15, 102-16, 102-17, 102-29, 102-30, 102-31, 102-43, 204, 205, 406-1, 407-1, 408-1, 409-1, 412-1, 414-1, 414-2

Supply Chain.

Globally connected

to collaborate closely.

SUSTAINABILITY THROUGH LONG-TERM COMMITMENT

Over the years, our network of material suppliers and garment manufacturers has steadily grown. This diversification has played a key role in ensuring BP®'s high delivery capability in recent years.

GREENHOUSE GAS EMISSIONS AND COMPLEX LOGISTICS IN THE TEXTILE SUPPLY CHAIN

The textile supply chain in the clothing industry is complex and multi-layered.

Our supply chain spans various countries and includes numerous partners, from the procurement of raw materials to the production of finished goods. This diversity allows us to develop innovative solutions and build partnerships based on shared values and goals.

We are aware that logistics routes within our supply chain present additional challenges, particularly with regard to the emissions they generate.

That is why we are actively working to measure the emissions from our transport and logistics processes and to improve their efficiency in order to reduce emissions.

In addition, we work closely with our suppliers to ensure that they meet our high sustainability standards. This includes promoting fair working conditions, protecting the environment, and upholding ethical business practices.

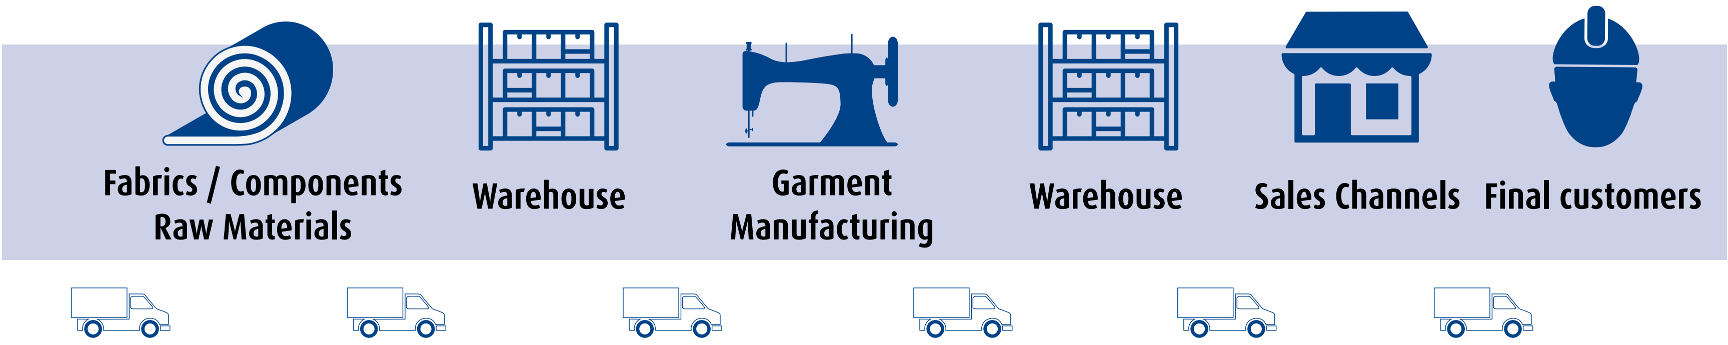
Overall, we view the complexity of our textile supply chain as an opportunity to drive positive change and contribute to a more sustainable apparel industry.

Since around 70% of CO_2 emissions occur in upstream production stages, we are intensifying our dialogue with stakeholders.

WHERE DO EMISSIONS OCCUR ALONG THE SUPPLY CHAIN?

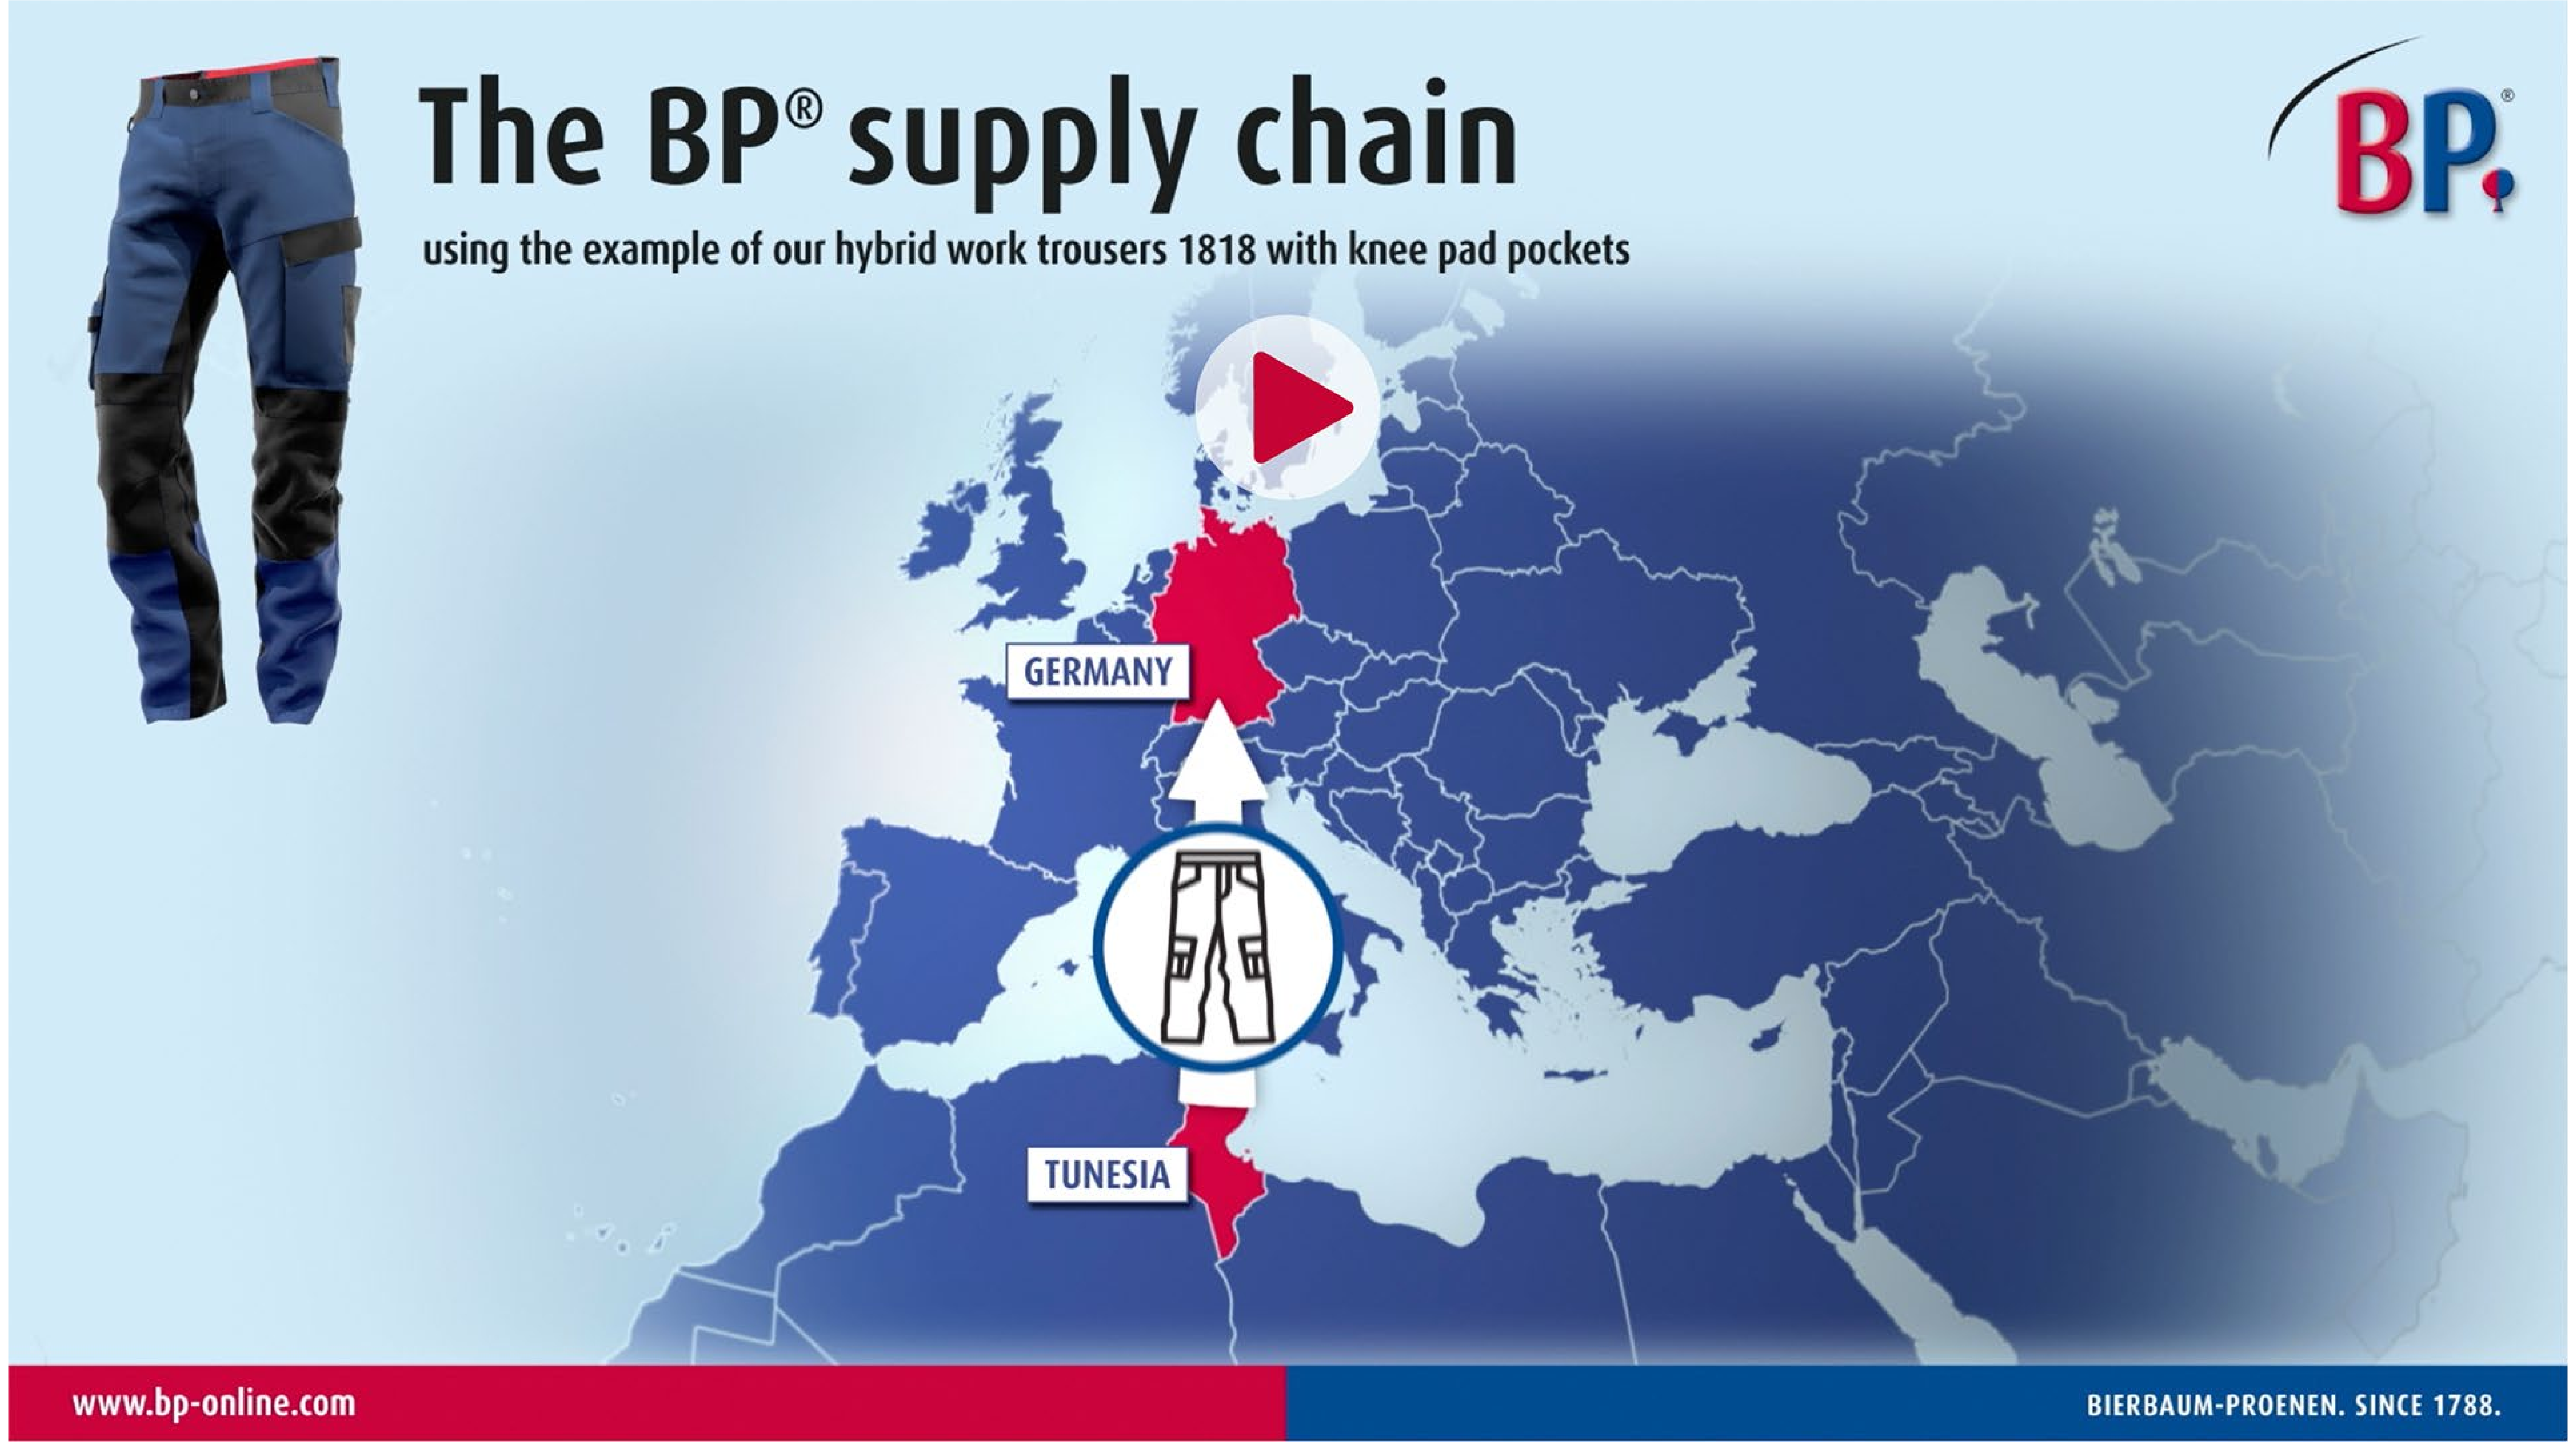
Upstream supply chain stages 2–4; CO_2 share purchased

Downstream supply chain CO_2 emissions caused by our own activities



Activities on the part of our upstream suppliers (materials) account for **approx. 70%** of total CO_2 emissions.

The best suppliers for our products: Global sourcing.



Climate Protection.

Step by step towards achieving CO_2 reduction targets:

Our Company Carbon Footprint.

BP® AND CLIMATE PARTNER

ClimatePartner offers climate protection solutions by helping companies calculate their CO_2 emissions, reduce them, and offset remaining emissions through global climate protection projects.

Using a personalised Climate ID number, certified climate protection measures and the amount of CO_2 offset can be transparently tracked. This cooperation with ClimatePartner ensures the highest level of transparency in climate matters.

In this context, we deliberately no longer speak of CO_2 neutrality, as the term gives the misleading impression that no greenhouse gases are emitted at all.

CALCULATE

Recording our CO_2 values in Scopes 1, 2 and 3. In Scope 3, we currently calculate the categories listed in the table. All other categories are not for now oder at the moment.

AVOID/REDUCE

Analysis of processes to reduce avoidable emissions.

COMPENSATE

Offsetting unavoidable CO_2 emissions through climate protection projects.

In general, our focus is on **avoiding and reducing** CO_2 emissions. This takes priority over **compensation.**

THE BP® COMPANY CARBON FOOTPRINT

The Corporate Carbon Footprint (CCF) represents a company's CO_2 footprint and forms the basis for climate protection measures. The CCF provides clear insights into a company's greenhouse gas emissions. Since 2022, BP® has been preparing its CCF together with ClimatePartner.

The calculation is carried out according to the ClimatePartner protocol, based on the Greenhouse Gas Protocol (GHG Protocol). Emissions are divided into three categories:

» Scope 1: direct emissions controlled by the company (e.g. fuel consumption from company vehicles)

» Scope 2: indirect emissions from purchased energy (e.g. electricity)

» Scope 3: all other indirect emissions along the value chain (e.g. logistics)

For the Cologne site, emissions from Scope 1 and 2 are calculated in full. In Scope 3, the following categories are currently included: energy-related emissions, employee commuting, business travel, and operational waste. In the long term, BP® aims to capture all Scope 3 emissions. This will require additional primary data from upstream supply chain stages.

MORE INFORMATION about our reduction targets and our collaboration with ClimatePartner can be found here.

ClimatePartner certified company
climate-id.com/TWXG2V

BP® COMPANY CARBON FOOTPRINT	2023		2024	
	(kg CO_2e)	(%)	(kg CO_2e)	(%)
Electricity, heat, cooling and water purchased for own needs	9,860.34	2.1	8,309.98	2.0
Company vehicles	144,941.49	31.8	139,381.96	33.1
Corporate waste	3,523.32	0.8	3,537.47	0.8
Business trips	47,798.05	10.5	72,055.82	17.1
Fuel- and energy-related emissions	94,653.95	20.8	43,086.51	10.2
Printing products and printer paper	3,206.89	0.7	3,281.83	0.8
Commuting by employees	128,020.56	28.1	127,346.97	30.2
Working from home (starting 2020)	23,328.80	5.1	24,256.65	5.8
TOTAL	**455,333.39**	**100**	**421,257.20**	**100**

Since 2019, we have been recording our CO_2 emissions at the Cologne site. In 2019, the total was still 1,154,869 kg of CO_2. A great deal has been achieved since then, although the values fluctuate from year to year – for example, due to business travel.

102-11, 102-12, 102-13, 102-15, 102-21, 102-29, 102-31, 102-43, 302-1, 302-4, 302-5, 303-1, 303-5, 305, 306-2, 308-2

Social Responsibility.

Working together for more responsibility.

The BP® cooperation with the Fair Wear Foundation.

BP® is a member of FAIR WEAR fairwear.org LEADER

FAIR WEAR

YOU CAN FIND MORE INFORMATION HERE!
Everything about Fair Wear is available here.

THE FACTS:

» The Fair Wear Foundation (FWF) is a multi-stakeholder initiative aimed at improving working conditions in the textile industry.

» BP® is member of the FWF since 2010 and has been recognised as a "Fair Wear Leader" for the eleventh consecutive year.

» BP® and its garment manufacturers are committed to complying with the principles of the FWF and working on related improvements.

» All employees in the garment factories have access to the FWF complaints mechanism (see page 23).

» The implementation and monitoring of FWF principles at our manufacturing partners are carried out through regular visits, training sessions, audits and follow-up corrective action plans.

» BP®'s implementation of the FWF principles is reviewed annually as part of the FWF Brand Performance Check (management system audit at BP®). More details can be found here.

» Since the end of 2024, BP® is also member of the International Accord to support additional safety audits in sourcing countries Bangladesh and Pakistan.

EXPLANATION OF THE INTERNATIONAL ACCORD:

» The International Accord for Health and Safety in the Garment and Textile Industry (International Accord) is a legally binding agreement between apparel brands and trade unions. Its aim is to ensure the health and safety of workers in the textile and garment sector.

» The agreement provides the framework for implementing country-specific safety programmes, currently underway in Bangladesh and Pakistan. At the same time, it lays the foundation for expanding these measures to other production countries in the future.

THE PRINCIPLES OF THE FAIR WEAR FOUNDATION

The core principles 1–4 of the Fair Wear Foundation cover the fundamental labour standards of the International Labour Organization (ILO). These are social standards within the framework of global trade that aim to ensure decent working conditions and adequate protection.

More than just a matter of judgement:

The BP® Risk Analysis.

Since 2023, we have been working with an expanded risk analysis that covers all partners in supply chain tiers 1 and 2. As part of this process, we regularly assess all key topics and risk factors that may influence our collaboration.

Together with the double materiality analysis, this risk analysis forms the foundation of our daily operations. It covers core aspects such as the selection and support of our suppliers, compliance with the Act on Corporate Due Diligence Obligations in Supply Chains (LkSG), preparation for CSRD, and our memberships in the Fair Wear Foundation (FWF) and the Partnership for Sustainable Textiles.

As part of this risk analysis, we assess the political, economic, and social developments in our sourcing countries throughout the year, with a particular focus on conditions in our garment factories. We maintain regular contact with our local counterparts on site.

In addition, we examine the eleven sector-specific risks in the textile and apparel industry as defined by the OECD.

Findings from audit reports are also incorporated into our risk analysis.

When analysing a supplier country, we first determine the so-called gross risk. However, risks often vary by region, and conditions are not the same everywhere. That's why we also assess each partner individually. We examine whether the gross risk associated with the country is reduced by positive conditions at the specific facility (see example above right). If that is the case, we adjust our assessment accordingly – resulting in what we call the net risk.

This comprehensive analysis enables us to derive targeted measures to prevent risks and actively pursue improvements. It helps us meet our corporate and human rights due diligence obligations (HRDD) and increase transparency throughout our supply chain.

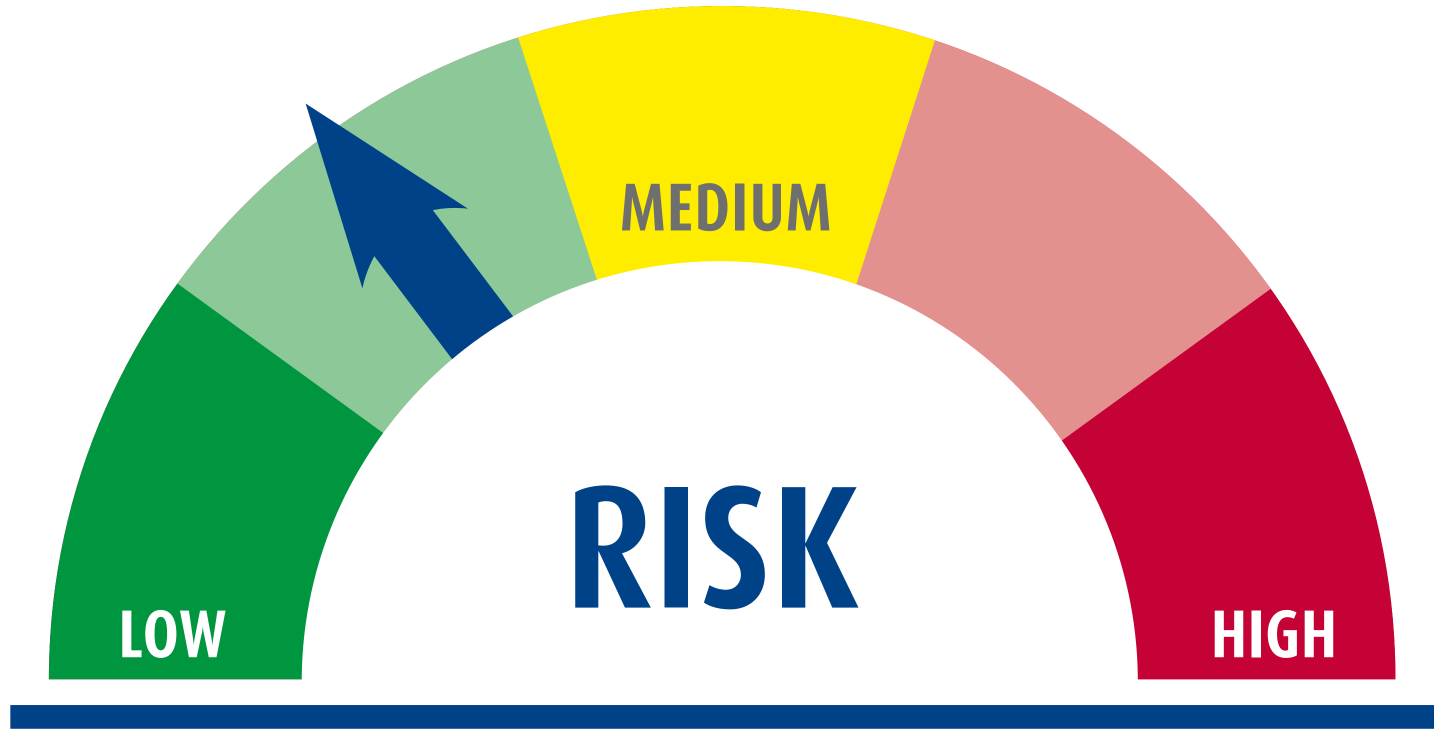
In this report, we introduce each of our manufacturing sites and explain, using specific examples, what risks were identified through our analysis and how we addressed them.

EXAMPLES OF KEY TOPICS FROM THE ANALYSES:

- Adaptation to Climate Change
- Environmental Pollution
- Resource Flows (Inputs and Outputs)
- Labour in the Value Chain
- Energy
- Water

EXAMPLE

The gross risk with regard to occupational and building safety in Tunisia is assessed as medium to high. However, since we know the facility very well, are regularly on site, the Fair Wear Foundation conducts regular audits there, and the facility is certified to ISO 9001 and ISO 14001, we classify the net risk as low to medium.



LOW: There are risks, but the probability of occurrence is low.

MEDIUM: There are risks, but we consider the probability of actual occurrence to be manageable.

HIGH: There are risks with a relatively high probability of occurrence, though they do not necessarily have to materialise.

Comment:
Given the current order situation in Vietnam, we regularly review the risk situation for our partner.

PAKISTAN

Specialist in Workwear, Gourmet and Med & Care

TRAINING: As part of the STeP certifications, extensive training sessions on topics such as quality management, chemical and environmental management, occupational safety, and social sustainability have been and continue to be held on a regular basis.

CERTIFICATION: Our garment partner and the upstream stage (dyeing & finishing) are STeP by OEKO-TEX® certified.

Comment:
In 2024, we introduced a “Target Wage Agreement” with our partner in Pakistan. This agreement stipulates that employee wages must exceed the minimum wage by a defined percentage. In addition, we joined the International Accord during the reporting year.

Solar system on the roof of the factory building

The salary data was collected over the course of the reporting year. All wage figures exclude bonus payments. The data does not include the salaries of management or service staff.

Serine, sewing expert at our Vetra® site in Tunisia

Good wages for good work:

BP® Pricing and Wage Policy.

Pricing and wages – an area of tension.

Like any company, we have an economic interest in offering our products at market-appropriate prices. At the same time, we are committed to ensuring that the people who produce our garments receive fair wages for their work. This means striking a balance and meeting both expectations.

Appreciative, respectful, and trusting communication with our partners is essential here, as wages and salaries are not paid by BP® directly, but by our manufacturing partners.

There is no single simple solution, of course. But together with the Fair Wear Foundation (FWF) and the Partnership for Sustainable Textiles, we are developing various approaches and ideas to gradually improve wages and salaries.

You can find detailed information about our continuous improvement process in the BP® Sustainability Report 2023.

TARGET WAGE AGREEMENTS:

Since 2022, we have had a Target Wage Agreement in place at our VETRA site. It ensures that employee wages are always set at a fixed percentage above the minimum wage – even when minimum wages increase.

In 2023, we increased this percentage for the first time.

In 2024, we also concluded a similar Target Wage Agreement with our partner in Pakistan.

These agreements are reviewed regularly and will be gradually expanded. They provide a transparent and reliable way to improve wages while securing the level achieved – even under changing minimum wage conditions.

In 2024, BP® took part in the Living Wage Project 2.0 in Pakistan as part of the Partnership for Sustainable Textiles. This project included, among other things, a deeper analysis of employee wages. One encouraging outcome for us was the conclusion of the aforementioned **TARGET WAGE AGREEMENT.**

More information about the Living Wage Lab 2.0 can be found here.

Tried and tested:

The BP® Complaints System.

» Our membership of the Fair Wear Foundation (FWF) means that the staff of our manufacturing partners have access to a well-established complaints management system.

» This also allows us to meet the requirements of the Act on Corporate Due Diligence Obligations in Supply Chains.

» All employees can find information at their local site about how the complaints process works by reading displayed notices, attending training seminars and consulting the local teams in the 10 countries in which the FWF is active.

» No. of complaints at BP® since 2014: 28

» No. of complaints at BP® in 2024: 3

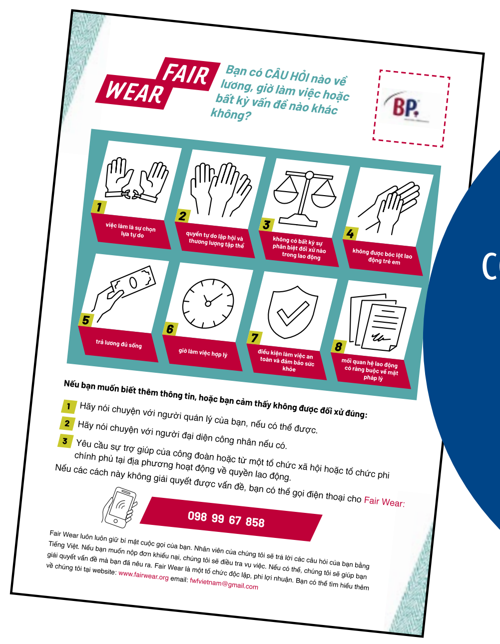
COMPLAINT PROCEDURE



COMPLAINT
Employee makes a complaint (anonymously if preferred) via the hotline or email.

FWF
Upon receipt of a complaint, the FWF checks whether it is justified and if the company has breached one of the eight FWF principles.

ONLINE
The FWF publishes the complaint including status tracking on its website.

Forwarding

BIERBAUM-PROENEN
Together with the manufacturing partner, BP® seeks a solution and works in co-operation with the partner to deal with the complaint.

\+ **FWF**
The FWF helps BP® and the manufacturing partner to find a solution.

Finding a solution

SOLUTION

TÜRKIYE

UNFAIR DISMISSAL WITHOUT SEVERANCE PAY

In **July 2024**, we received a complaint from our Turkish garment manufacturing partner. An employee reported that their employment had been terminated unfairly and without severance pay. Together with the FWF and the factory, we are working on a mutually acceptable solution. The complaint is still open and under review. > to the complaint

TUNISIA

DISCRIMINATION AND UNFAIR DISMISSAL

In **September 2024**, we received a complaint from our Tunisian factory VETRA. The complainant felt discriminated against after being denied the 2024 pay raise and access to work tools. At the end of September, they were informed that their contract would be terminated, with an offer of severance pay equal to 1.5 months' salary per year of employment. The employee declined and contacted the FWF team via the hotline.

After further discussions and mediation by the FWF, both parties agreed on severance compensation that exceeded the legal minimum. The complaint was resolved to the satisfaction of both parties.

BANGLADESH

OUTSTANDING PAYMENT FOR FORMER EMPLOYEE

In **December 2024**, we received a complaint from our former garment facility in Bangladesh. The complainant had voluntarily left the company in February 2024. Despite several reminders, the factory management failed to settle her legal entitlements.

The manufacturing partner submitted documents claiming the payments had been made. The various statements are currently being reviewed, and the complaint is under investigation..

PAKISTAN

OUTSTANDING PAYMENTS FOR FORMER EMPLOYEES

Ongoing complaint from 2022:
This case was already covered in previous sustainability reports. Due to the many different stakeholders involved, it is still under review. Further details are available on the FWF Website.

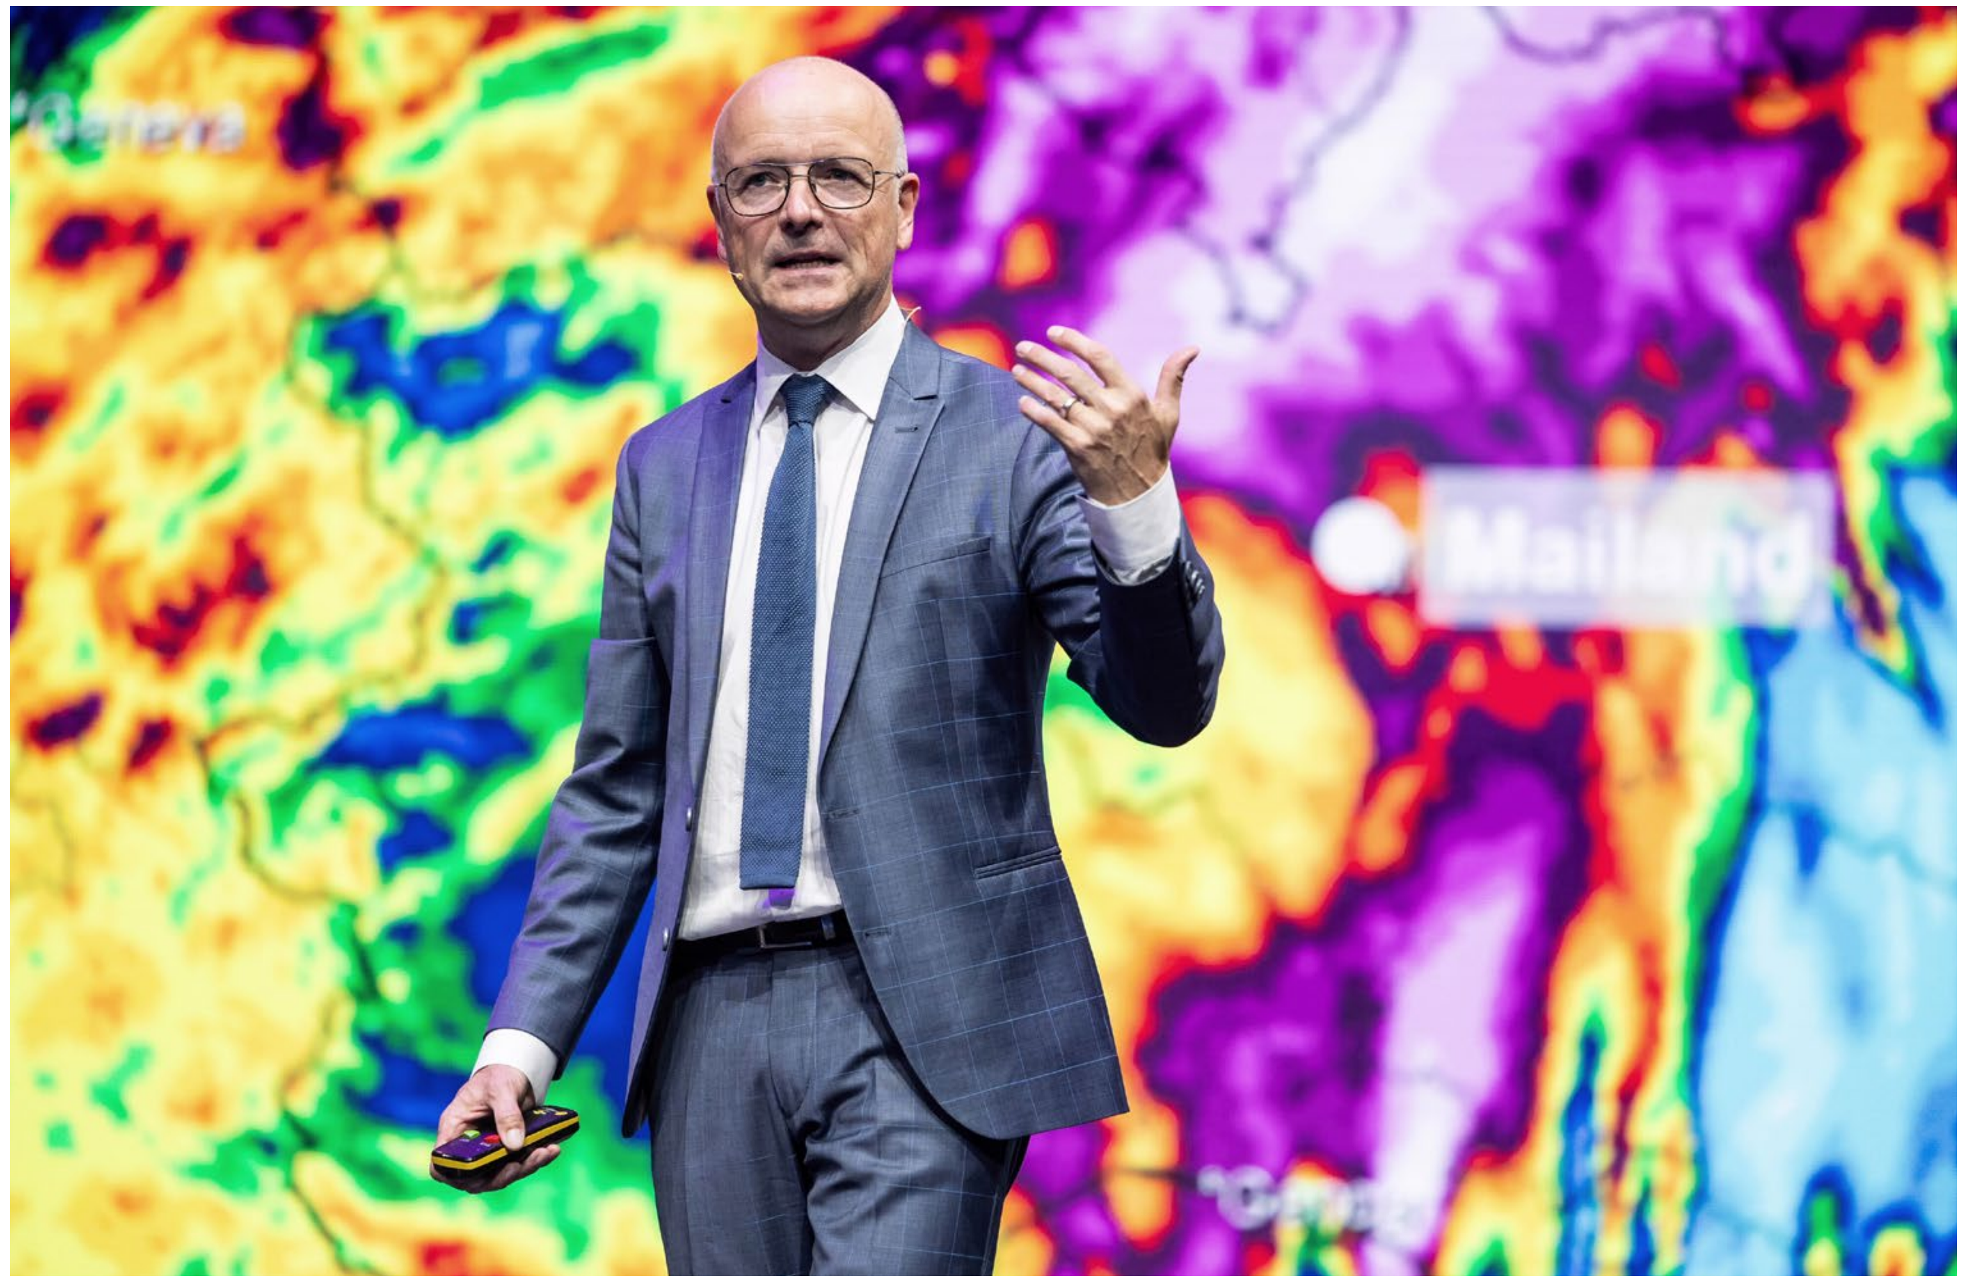
Karsten Schwanke:

My First Day as Climate Advisor at BP®.



KARSTEN SCHWANKE

Holds a degree in meteorology and has been presenting the weather on ARD since 1995 – on national programmes such as Wetter vor Acht and Tagesthemen, as well as on various regional channels. He also works as a keynote speaker, science journalist and film producer, and runs his own weather company, MeteoCloud.

” Workwear, for seven generations, right behind the cathedral. That's about all I knew when, almost exactly a year ago, I gave a keynote speech on the challenges of climate change at BP®'s sustainability forum. Even then, I was impressed by the seriousness with which BP® – together with its suppliers and customers – approaches the topic of sustainability. That keynote turned into something more – and starting in 2025, I'll be accompanying the company on its journey toward greater sustainability, especially in the area of climate protection.

To get to know the company better, I spent a full day at BP® in late March 2025. From the laboratory to the sample sewing department, development and design, and even the laundry room (which is basically always running), I gained a wealth of impressions – especially on a human level: No matter who I spoke with, the employees were proud to work at company headquarters. Proud of what they do, and eager to show me everything and patiently answer my questions. And that's exactly how sustainability starts: with a team, with positive energy, and with a committed group of people.

Of course, I'm also aware of the challenges – especially when it comes to reducing CO_2 emissions. From what I've heard, a lot has already been achieved in recent years. But in production, logistics and the vehicle fleet, large CO_2 budgets still remain on the books.

That's where I'll be taking a closer look – and asking questions: In recent years (including 2024), the company has achieved its self-imposed CO_2 reduction targets, as stated in its sustainability reports. But what kind of targets were these? On what basis were they set? How ambitious were they?

Unfortunately, I didn't find answers to these questions – but they matter. I'm convinced this will be an exciting journey for both of us – for BP® and for me. I'll learn a lot, bring in an external perspective, ask critical questions, help initiate processes, and ultimately, help motivate – to get closer to the goal of climate neutrality. I'm looking forward to the steps ahead! ”

Sustainability is teamwork.

GRI NUMBERS

QUICK-START GUIDE TO SUSTAINABILITY

AUDIT
An audit systematically evaluates whether a process or an activity complies with the previously defined requirements and standards.

CO_2e
Carbon dioxide equivalent (CO_2e) is a unit of measurement used to determine the effect of various greenhouse gases (GHG) on the climate. These effects can be made comparable by converting different types of emissions into the equivalent amount of carbon dioxide (CO_2).

CSRD
Corporate Sustainability Reporting Directive. This is a new EU directive under which companies are required to report on sustainability topics according to ESG criteria.

ESG
Environmental, Social and Governance. These criteria are used to evaluate a company's actions in relation to environmental and social issues, as well as responsible corporate governance.

FWF
Fair Wear Foundation. The multi-stakeholder initiative aims to improve working conditions in the clothing industry. For more information, see page 17.

HRDD
Human Rights Due Diligence. This term refers to the human rights due diligence that a company is required to apply along its supply chain. The identification of risk plays an important role in this process.

ILO
International Labour Organisation. The International Labour Organisation is a social justice organisation of the United Nations with 187 member states.

LkSG
The German Act on Corporate Due Diligence Obligations in Supply Chains is the legal instrument that transfers the human rights due diligence (HRDD) of companies to German law.

OECD
Organisation for Economic Co-operation and Development. This organisation is comprised of 38 member states. It develops international standards and sets the social, economic and ecological agenda.

LEGAL NOTICE

REPORTING CYCLE
The sustainability report is published annually. This is the eighth edition.

REPORTING IN COMPLIANCE WITH GRI STANDARDS
This report has been prepared with reference to the Global Reporting Initiative (GRI) guidelines. It is based on the GRI Content Index and provides information about core indicators.

EXTERNAL REVIEW OF THE REPORT
This report has not been externally reviewed.
